16MP All-in-one IR Al Traffic Camera

### **System Overview**

With its high-performance AI processor, 16MP All-in-one IR AI Traffic Camera delivers high quality images even in the toughest weather conditions. For monitoring, it uses deep learning algorithms and GS-CMOS image sensors with a wide dynamic range and a high frame rate, making it ideal for traffic scenarios. The IR illuminators supplement light when the camera captures license plates without using the external flashing light or strobe, significantly reducing light pollution. A radar is also built into the device, allowing it to measure vehicle speed and sense data from a wide range of perspectives. For network transmission, the device only requires a single 4G card, eliminating the need for network cables.

#### **Functions**

#### Wireless 4G

The camera works with just a 4G card, eliminating the need for network cables. It is powered by its embedded high-performance 4G mobile network module, which also allows the camera to be added to the platform for remote control through auto registration, where it can then be used to transmit traffic violation data and ANPR data to the platform.

#### **Reduced Light Pollution**

The IR illuminators supplement light when the camera captures license plates without using the external flashing light or strobe, significantly reducing light pollution.

## **Ultra-high Frame Rate**

Uses traffic-specific, high-performance GS-CMOS image sensors with a wide dynamic range, high frame rate, and high signal-to-noise ratio, displaying realistic video images in the day and night. This makes it ideal for traffic scenarios.

- · GS-CMOS image sensor.
- 5320 × 3032@30 fps.
- · Video compression standards: H.265, H.264M, H.264H and MJPEG.
- · Works in poor lighting and does not smear.
- · High-speed capture.
- · A camera, illuminator, radar and more combined in one.
- IP66
- 850 nm IR illumination
- · 4G mobile network module.
- Under recommended installation and lighting conditions:
   Capture rate >99%

LPR accuracy >98%.

#### Video Metadata

Deep learning algorithms and a high-performance AI processor allow the camera to detect and extract metadata on motor vehicles and nonmotor vehicles, providing a reliable data source that can be used in making effective decisions.

#### **Applicable to Various Road Scenes**

Ideal for scenarios where license plate recognition is needed, the camera is capable of capturing more than ten different types of traffic violations, and supports traffic information collection and event detection.

#### **Multi-dimensional Data Sensing**

GPS positioning is supported, and used in time synchronization. A radar is also built into the device, allowing it to measure vehicle speed and sense data from a wide range of perspectives.

#### Safe and Reliable Performance

Built to withstand the toughest conditions, this camera functions in a wide temperature and voltage range. It is designed with an IP66 case, which protects the camera and its internal components, such as the radar and illuminators, from receiving damage. Feel safe using it in all-weather types.

## Scene

The camera is ideal for use in intelligent traffic management and for smart city businesses. It is capable of detecting traffic violations, capturing license plates, generating passing vehicle records, collecting traffic data, and detecting events.

Technical Specificat	ion	Anto Doct		
Camera		Auto Registration		
Image Sensor	1.1" GS-CMOS	Intelligence		
Shutter Mode	Single shutter; Double shutters; Three shutters	Target Detection		
Electronic Shutter Speed	Auto/Manual 1/50 s=1/100,000 s	Face Detection		
Noise Reduction	3D NR	ANPR		
S/N	48 dB			
WDR	120 dB	Vehicle Type Recognition	hicle Type Recognition	
Minimum intensity	0.001 lux			
Day/Night	Supports ICR auto switch: IR cut-off filter (IRCF) with the polarizing filter is used during the daytime, and switches to the IR transmitting filter at night	Vehicle Color Recognition		
Illuminator		Accuracy (under recommended	•	
Illuminator Number	16	installation and lighting conditions)		
IR	850 nm	conditionsy		
Illumination Distance	23 m-50 m (75.46 ft-164.04 ft) (adjustable brightness)			
IR Covered lane	Center mount: 5 lanes Side mount: 4 lanes	Vehicle logo		
Radar				
Central Frequency	24.05 to 24.25 GHz			
Measurement Accuracy	±2 km/h			
Velocity Range	5 to 300 km/h			
Tracking Target	Up to 64	Motor Vehicle Violation		
Certification	OIML R91	Snapshot		
Lens				
Lens Type	Motorized vari-focal	Motorcycle yehicle		
Focal Length	16 mm-40 mm	Motorcycle vehicle Violation Capture		
Max. Aperture	F1.4	Traffic Flow Detection		
Aperture Type	Piris	Traffic Event		
Field of View	Horizontal: 21.4°–50.6° Vertical: 12.3°–28.9°	Video	driving, and traffic congestion  Video
