ZG1

Smart Alarm Gateway

The smart alarm gateway is the control center of the security alarm system. Users can add, manage and control Zigbee sensors through the gateway. The alarm messages of the sensors are all reported by the gateway to the Imou cloud platform, and finally pushed to the user APP.

Wired&Wireless Connection
Gateway can connect to both wired and Wi-Fi

One-key configuration
Switch Home/Away/Disarm mode with one click

Remote APP control
Configure and view the state of the gateway through the APP

Local area network linkage
After the configuration, the home without network can still alarm

32-way sub-device access
A maximum of 32 sub-devices can be configured under the gateway

Built-in Siren
Remind your family of the alarm by sound
